Abstract and Concrete; the first of which alone can enter into true equations. Every equation is a relation of equality between two abstract functions of the magnitudes in question, including with the primary magnitudes all the auxiliary magnitudes which may be connected with the problem, and the introduction of which may facilitate the discovery of the equations sought. This distinction may be established by both the a priori and a posteriori methods; by characterizing each kind of function, and by enumerating all the abstract functions yet known, --at least with regard to their elements. A priori; Abstract functions express a mode of dependence between magnitudes which may be conceived between Abstract numbers alone, without the need of pointing out any unc wni. phenomena in which it may be found realized; Concrete while Concrete functions are those whose expression on requires a specified actual case...
