Date :2008-04-02 version 1. This textbook for general education Eleventh Five-Year national planning materials. The teaching materials to the Ministry of Education Steering Committee to develop new teaching basic requirements as the basis. the main contents include: frequency-selective network and impedance transformation. high-frequency small-signal amplifier. sine wave oscillator. the spectrum moving circuit. angle modulation and demodulation circuit . feedback control circuit and frequency synthesizer technology. high frequency power amplifier. interference and noise. In the content of the presentation. try to be clear thinking. from simple to complex. easy to self. While focusing on the theory and practice. closely around the circuit to receive communications system. transmission equipment. to receive the sending device to the background. and signal transmission circuit from the perspective of each of the functional analysis of the circuit and the organic relationship between them combined so that students in machine learning theory while building the concept. This material can serve as a communications engineering. electronic information engineering undergraduate teaching professional. but also as a vocational. TV. teaching staff and a large reference book on engineering and technical personnel.
